

Wire Cloth Accessories

Tie Wire

Marco carries top quality stainless steel tie wire. Wire diameters include: .047, .051, and .062. Tie wire package size options include: Exact 25lb. coils; 5lb. and 10lb. spools; 10lb. and 12 lb. dispenser boxes; 3-1/2 lb. coils to fit Ideal Reels. Tie wire stocks also include cop per clad wire, special alloys and wire diameters.

Hook Strips and Edges

Hook Strips and Edges are galvanized unless otherwise specified. Screens for classifying, sizing, straining, sieving, and are typically held by clamping rails that apply tension across the screening surface. The tension is applied through edge treatments on the woven wire cloth screen panel commonly referred to as hooks, hook strips, or hooking strips. Proper screen tension is crucial for effective screening and longer screen life. Our edge preparations fit the deck properly for easy screen installation and tensioning. Banded hook edges increase strength (prevent flattening) and eliminate mesh pullout on fine wire mesh or high tension screens. Screens are available with any style of edge preparation or hook strip, ready for field installation upon delivery.

U-Edging

U-Edging is a wire mesh product accessory that is a u-shaped strip attached to the edge of a wire mesh product sheet to make the edges more attractive and safer. Being the most economical makes it the most common U-edge to safely secure the edges of most of our wire products. It is available in carbon steel, stainless steel, aluminum and galvanized steel. Our U-Edging is easy to install, available in custom lengths and fully welded to ensure a solid encasement for the wire mesh.
